

Overview of Math Course Recommendations at Wydown Middle School

The School District of Clayton's mathematics program challenges students to think deeply, construct arguments, and work together to solve problems and generalize results. Wydown's math department aims to provide all students with a mathematical experience that will equip them with the opportunity to achieve at a level that challenges them while allowing them the confidence to be independently successful in mathematics and ensure maximum growth each year.

Using your child's data profile and classroom performance, teachers work in partnership with the building math specialist, subject manager, and the District math curriculum coordinator to determine the best math placement for your child. This data profile includes your child's longitudinal performance on District and classroom assessments as well as classroom performance observations. Math course recommendation conversations between home and school take place during the second semester.
